1 Executive Summary

1.1 Purpose of UAT

The purpose of this User Acceptance Testing (UAT) Report is to document the business validation activities performed for the Oyster Herbals Digital Commerce Platform. The testing process was conducted to verify that the platform satisfies business requirements and supports real-world operational workflows.

1.2 Testing Scope

Testing covered the complete customer journey, including product browsing, product search, WhatsApp ordering, user registration, user authentication, review submission, and administrative catalog management activities.

1.3 Testing Objectives

- Verify accurate display of product information and pricing.
- Validate WhatsApp-based ordering workflows.
- Confirm secure user registration and authentication.
- Ensure customer review functionality operates correctly.
- Verify administrative catalog management capabilities.

2 UAT Overview

2.1 Project Overview

The Oyster Herbals Digital Commerce Platform provides customers with a digital product catalog and a simplified WhatsApp-based ordering mechanism. The platform supports business growth by reducing manual processes while maintaining personalized customer communication.

2.2 Testing Approach

User Acceptance Testing followed a scenario-based approach using realistic business workflows. Test participants executed predefined tasks and validated whether expected business outcomes were achieved successfully.

2.3 Stakeholders Involved

Participant	Role	UAT Responsibility
Dr. Anshumaan	Business Owner	Approval of business workflows and product information.

Clinic Administrative Staff	Operations Team	Validation of catalog management and order processing activities.
Customer Testers	End Users	Validation of browsing, ordering, and review submission workflows.
Business Analyst	Testing Coordinator	Execution management, defect tracking, and reporting.

3 UAT Scope

3.1 In Scope

- Product Catalog Browsing
- Product Search Functionality
- WhatsApp Ordering
- User Registration
- User Login
- Reviews and Ratings
- Administrative Product Management
- Product Pricing Updates

3.2 Out of Scope

- Payment Gateway Integration
- Shipping Provider Integrations
- Inventory Synchronization Systems
- Consultation Booking Functionality

3.3 Assumptions

- Test users have internet connectivity.
- WhatsApp accounts are available for testing.
- Administrative accounts are provisioned.
- Test product data is available within the platform.

3.4 Entry Criteria

- Functional testing completed successfully.
- Test environment prepared and verified.

- UAT scenarios reviewed and approved.
- Test participants assigned and briefed.

3.5 Exit Criteria

- All planned test scenarios executed.
- Critical and high-severity defects resolved.
- Stakeholder approval received.
- Platform approved for production release.

4 Test Scenarios

4.1 Business-Focused UAT Scenarios

lightgray Scenario ID	Test Scenario	Business Objective	Expected Result
UAT-SC-001	Product Browsing	Verify customers can browse products and pricing information.	All active products display correctly with images, pricing, and descriptions.
UAT-SC-002	Product Search	Validate product discovery through keyword searches.	Matching products appear quickly and accurately.
UAT-SC-003	WhatsApp Ordering	Verify order routing through WhatsApp.	WhatsApp opens with correct business number and prefilled order details.
UAT-SC-004	User Registration	Ensure new customers can create accounts securely.	Unique accounts are created successfully and duplicate registrations are rejected.
UAT-SC-005	User Login	Validate secure authentication workflows.	Authorized users gain access while invalid credentials are rejected.
UAT-SC-006	Reviews & Ratings	Verify customer review submission functionality.	Authenticated users can submit one review per product.

UAT-SC-007	Product Management	Validate administrator catalog management capabilities.	Administrators can add, edit, and remove products successfully.
UAT-SC-008	Pricing Updates	Verify real-time catalog price management.	Updated pricing appears immediately on customer-facing pages.

5 Test Execution Summary

5.1 UAT Execution Ledger

lightgray Scenario ID	Test Scenario	Status	Issues Identified	Resolution / Comments
UAT-SC-001	Product Browsing	Passed	None	Responsive behavior validated across mobile and desktop devices.
UAT-SC-002	Product Search	Passed	None	Keyword searches returned accurate product results.
UAT-SC-003	WhatsApp Ordering	Passed	Minor formatting issue	WhatsApp message formatting updated for improved readability.
UAT-SC-004	User Registration	Passed	None	Duplicate email validation operated correctly.
UAT-SC-005	User Login	Passed	None	Authentication and session management performed successfully.
UAT-SC-006	Reviews & Ratings	Passed	Duplicate review issue	Validation logic updated to prevent multiple reviews by the same user.
UAT-SC-007	Product Management	Passed	None	Product creation, editing, and deletion worked as expected.

UAT-SC-008	Pricing Up-dates	Passed	None	Catalog pricing reflected on dash-board changes immediately.
------------	------------------	--------	------	--

5.2 Execution Summary Statistics

lightgray Metric	Result
Total Test Scenarios Executed	8
Passed Scenarios	8
Failed Scenarios	0
Critical Defects	0
High Severity Defects	2
Closed Defects	100%
Overall UAT Status	Passed

5.3 Overall Execution Outcome

All planned UAT scenarios were executed successfully. Minor issues identified during testing were resolved prior to final acceptance. No unresolved critical or high-severity defects remained at the conclusion of testing, allowing the platform to proceed to business approval and production readiness assessment.

6 Defect Summary

6.1 Defect Log

lightgray Defect ID	Description	Severity	Resolution Status
DFT-001	WhatsApp order messages displayed inconsistent spacing between product names and prices.	Minor	Closed
DFT-002	Users could submit multiple reviews for the same product.	Medium	Closed

DFT-003	Administrative dashboard access validation was inconsistent under specific navigation scenarios.	High	Closed
DFT-004	Cloud image upload delays occasionally resulted in missing product images.	High	Closed

6.2 Defect Resolution Outcome

All identified defects were successfully resolved and retested. No open defects remained at the completion of User Acceptance Testing. Corrective actions improved platform security, usability, data integrity, and operational reliability.

7 User Feedback Analysis

7.1 Customer Tester Feedback

lightgray User Group	Feature Tested	Feedback Received	Business Assessment
Existing Patients	Catalog and WhatsApp Ordering	Ordering products is significantly easier than phone-based requests.	Improves convenience and supports repeat purchases.
New Customers	Reviews and Ratings	Customer reviews increased confidence in purchasing decisions.	Strengthens trust and supports conversion.
Mobile Users	Search Functionality	Products were easy to locate and pages loaded quickly.	Validates mobile-first usability objectives.

7.2 Administrative Staff Feedback

- Product management activities are significantly faster than manual catalog maintenance.
- Pricing updates are easier to control and distribute consistently.
- Prefilled WhatsApp inquiries reduce manual communication effort.
- Dashboard workflows are intuitive and easy to learn.

7.3 Overall Satisfaction Assessment

The overall feedback received from customer testers and administrative staff was highly positive. Participants reported improvements in accessibility, efficiency, ease of use, and overall customer experience. The platform successfully addressed many of the operational challenges identified during earlier business analysis activities.

8 Acceptance Assessment

8.1 Acceptance Criteria Verification

lightgray Feature Group	Acceptance Criteria	Verification Status	Evidence
Product Catalog	Products display correctly with accurate information and pricing.	Met	Validated during browsing tests.
WhatsApp Ordering	Orders route correctly with prefilled information.	Met	Verified through order routing scenarios.
User Authentication	Secure registration and login functionality.	Met	Validated through account creation and login testing.
Reviews and Ratings	One review per user per product.	Met	Verified after defect correction and retesting.
Administrative Dashboard	Authorized administrators can manage products.	Met	Confirmed during CRUD operation testing.
Image Management	Images display reliably across listings.	Met	Verified after image fallback implementation.

8.2 Readiness Assessment

lightgray Assessment Area	Status	Comments
Business Readiness	Ready	Business workflows validated successfully.
Operational Readiness	Ready	Administrative users trained and prepared.

Customer Experience Readiness	Ready	Customer-facing workflows performed successfully.
Technical Stability	Ready	No unresolved critical or high-severity issues.
Go-Live Readiness	Ready	Approved for production deployment.

8.3 Business Approval Summary

Based on completed testing activities, stakeholder feedback, and successful defect resolution, the Oyster Herbals Digital Commerce Platform satisfies the defined acceptance criteria and is approved to proceed to production deployment.

9 Recommendations

9.1 Immediate Recommendations

- Verify all catalog pricing and product descriptions before production launch.
- Confirm that WhatsApp ordering routes correctly to the designated business account.
- Conduct a final administrative review of product images and category assignments.
- Establish standard operating procedures for catalog updates and customer communications.

9.2 Post-Launch Recommendations

- Monitor WhatsApp inquiry response times during the first month of operation.
- Encourage existing patients to submit verified product reviews.
- Review customer feedback regularly to identify usability improvement opportunities.
- Track customer behavior metrics to support future product enhancements.

9.3 Future Enhancement Suggestions

- Enable saved customer delivery addresses for faster repeat purchases.
- Introduce customer loyalty and retention programs.
- Expand digital services to include consultation and appointment booking capabilities.
- Implement advanced analytics and reporting dashboards for business monitoring.

10 Final Sign-Off

10.1 UAT Outcome

User Acceptance Testing for the Oyster Herbals Digital Commerce Platform was completed successfully. All planned business scenarios were executed, validated, and approved.

10.2 Approval Statement

The testing results confirm that the platform satisfies the defined business requirements, supports intended customer workflows, and provides the administrative capabilities required for operational use.

10.3 Go-Live Recommendation

Based on successful execution of all UAT scenarios, closure of identified defects, and positive stakeholder feedback, the platform is recommended for production deployment and public launch.

Approval Category	Status
Business Validation	Approved
Operational Validation	Approved
User Acceptance Testing	Approved
Production Readiness	Approved
Go-Live Recommendation	Approved

11 Conclusion

11.1 Testing Success

The User Acceptance Testing process successfully validated the primary business workflows of the Oyster Herbals Digital Commerce Platform. Product browsing, search functionality, WhatsApp ordering, customer account management, review submission, and administrative operations all performed according to business expectations.

11.2 Business Readiness

The platform is operationally ready to support daily business activities. Administrative users can manage product information efficiently, while customers can discover products, access pricing details, and initiate purchases through a simplified digital experience.

11.3 Expected Outcomes

Following deployment, Oyster Herbals is expected to benefit from improved customer accessibility, reduced administrative workload, increased operational consistency, and stronger customer trust. The platform establishes a scalable digital foundation capable of supporting future business growth and expanded customer engagement initiatives.
